A PARTIAL BIBLIOGRAPHY OF THE WORLD DISTRIBUTION AND ZOOGEOGRAPHY OF BUTTERFLIES

OAKLEY SHIELDS

Department of Entomology,
University of California, Davis, California 95616

INTRODUCTION

THIS BIBLIOGRAPHY (albeit incomplete) is intended as a guide to the world's geographical distribution of butterflies, with emphasis on broader, more comprehensive works. Additional sources of major importance are contained in *Lepidopterorum Catalogus*, *Das Tierreich*, *Genera Insectorum*, Seitz' *Macrolepidoptera of the World*, *Zoological Record* (Insecta), and "Recent Literature on Lepidoptera" series in *Lepidopterists' News* (= *Journal Lepidopterists' Society*). Perhaps others will contribute further to the task of completing a thorough listing.

With the past decade of a major revolution in geology, "continental drift" has reappeared in the form of plate tectonics and sea-floor spreading. Butterflies are such a well-studied group zoogeographically that their distributional patterns eventually may be illuminated by the new ideas from geology (e.g. see Holloway, 1969). This bibliography was compiled in conjunction with my own studies (in progress) of the biogeography of organisms and plate tectonics, and is offered as an aid to others engaged in zoogeographical work.

I would like to thank the Interlibrary Loan Department at U.C. Davis for tolerating my many requests. This study was financed in part by an N. S. F. graduate traineeship.
